

Quick Start Guide

App: Nomadical

Version: 2.5.0

Owner: KangaBlue.au

Contact: skippy@kangablue.au

Last updated: 2026-04-14

Your offline survival companion — ready in minutes.

- **Install and open the app**

Launch Nomadical. The onboarding screen explains the app and AI model requirements.

- **Download the AI model (optional but recommended)**

Tap **Download AI Model** on the onboarding screen. The ~2.6 GB model enables the AI chat assistant and plant/object scanner. Requires Wi-Fi and free storage. Tap **Skip** to use all other features now and download later via Settings.

- **Set up your emergency info**

Tap the red **SOS** button, then tap **Edit** on the Personal Info Card. Enter your blood type, allergies, medications, and emergency contacts. This could save your life.

- **Explore the survival library**

Tap the **Library** tab. Browse over 1,000 articles across 22 categories, or use the search bar to find exactly what you need — works fully offline.

- **Import your own PDFs and chat with them**

In the Library, scroll the category chips to **My Docs**, tap **Import PDFs**, and pick any survival guide, first aid manual, or reference you have. Tap the green chat bubble next to a document to ask questions about it — answers are grounded in the document itself, fully offline. Scanned PDFs work too (on-device OCR runs automatically).

- **Scan a plant or object**

Tap the **Scan** tab, point your camera at a plant, mushroom, or object, and tap Capture. The on-device AI identifies it and shows a danger level. Always cross-reference before consuming anything wild.

- **Prepare your checklists**

Tap the **Checklists** tab and work through the Bug-Out Bag or First Aid Kit checklists to ensure you are ready before heading out.

- **You are ready**

Long-press the red SOS button anytime to activate emergency signaling instantly. Stay safe.
